EDUCATION

Sai Gon University

4th year student - Software Engineering

District 5, HCMC

2021 - Present

EXPERIENCE

Backend Developer Intern

May 2025 – Jul 2025

VNA International Technology JSC, Thu Duc City, Ho Chi Minh City

- Developed a labor safety reporting system for businesses and regulators using **NestJS**, **TypeORM**, **PostgreSQL**, and **MinIO**.
- Built RESTful APIs with a modular architecture (DTO, Controller, Service) and secured endpoints with **JWT**, custom decorators, and Guards.
- Implemented file upload via **Multer-S3** to **MinIO** and created auto-delete logic for outdated files.
- Built modules for enterprise management, user-role-permission management, report configuration, and approval workflows.
- Integrated **email notification system** for password recovery and report status updates using **nodemailer**.
- Documented APIs using **Swagger** and collaborated with frontend team for seamless integration.
- Gained experience in team collaboration, time management, debugging, and writing professional technical documentation.

PROJECTS

Multiplayer Tetris Game | *ReactJS, Node.js, Socket.io, CI/CD*

Sep 2025 – Nov 2025

- Developed a real-time multiplayer Tetris game, enabling players to compete in synchronized channels using **Node.js** and **Socket.io**.
- Implemented server-side logic to control and synchronize the piece sequence, ensuring all players receive the same piece simultaneously.
- Managed server-side game state, including progressively increasing piece fall speed to raise difficulty and logic to determine the winner (last player standing).
- Built the client using **ReactJS** to handle core gameplay logic, render the game board, receive player input, and send 'game over' signals to the server.
- Applied **Clean Code** principles and **Higher-Order Components (HOCs)** to create reusable logic and manage component state.
- Configured a **CI/CD** pipeline for automated building and testing of both client and server applications.

Spotify Clone Web App | *Django, ReactJS, Ant Design, REST API, MongoDB, Socket.io*

Feb 2025 – May 2025

- Built a full-stack Spotify-inspired web application supporting music and video playback, downloads, playlists, favorites, and admin control.
- Developed RESTful APIs using Django and Django REST Framework for user authentication, music/video management, chat, and profile features.
- Integrated a ReactJS frontend with Ant Design UI, enabling responsive design and interactive user experience across devices.
- Integrated Google Gemini AI to perform natural language processing on user search queries, enabling intelligent classification (song/album/artist) and parameter extraction in Vietnamese for a context-aware music search experience.
- Supported media file download and favorite system for both songs and videos, enhancing user engagement.

Car Rental Website | *PHP, MySQL, Bootstrap 5*

Feb 2025 – May 2025

- Built a responsive car rental website using PHP, Bootstrap 5, and Dashmix with multi-car booking support and detailed vehicle specifications.
- Implemented reservation deposits, return inspection with damage penalties, and real-time availability checks.
- Developed an admin dashboard for managing cars, bookings, users, and damage reports efficiently.

Diary Medical Website | *Java (Spring Boot), Bootstrap 4, MySQL, Hibernate*

Oct 2024 – Dec 2024

- Developed a web-based medical diary system using Spring Boot, MySQL, and Hibernate to help families track and manage health records securely.
- Implemented a user-friendly interface for updating medical history, viewing past visits, and tracking medication schedules.
- Integrated automated reminders for appointments and medications, with Spring Security ensuring data privacy and role-based access.
- Designed a responsive layout for seamless access on both desktops and mobile devices.

Ecommerce Website | *C#, ASP.NET, ReactJS, MSSQL, Socket.io*

Oct 2024 – Dec 2024

- Built a full-featured e-commerce platform supporting product browsing, cart management, order processing, and real-time user notifications using Socket.io.
- Designed and implemented a secure user authentication system with role-based access control, enhancing data security and user experience.
- Integrated MSSQL for efficient data management, ensuring fast product searches and seamless order tracking.
- Optimized server performance by implementing asynchronous operations in ASP.NET, reducing page load time and improving scalability.
- Developed an intuitive admin dashboard to manage inventory, orders, and user data, enabling streamlined backend operations.

TECHNICAL SKILLS

Backend: C/C++, PHP , Python , Java , JavaScript , Django , Spring boot , Node.js

Frontend: HTML5 , CSS/SCSS , RESTful API , Bootstrap, ReactJS

Developer Tools: Git , Docker , Github , Postman , VS Code , Visual Studio , PyCharm , IntelliJ , Eclipse

Database: MSSQL , MySQL, PostgresQL
